

Preprocessor : scan codes with % prefix and turn it into codes

istruc : a instant of a struct

example :

```
struct student
{
    .id: resb 10
    .name: resb 150
    .grade: resb 1
} = student_size
endstruct
```

write a program that takes user input for n

- ① prompt user for number of students
- ② prompt for input on each student
- ③ print all students

Hint : reserve space for 36 students
